

Case 2

Kautex Textron

Turnover £26m

Sector

Automotive manufacturing

Location

3 sites in West Yorkshire

Customer Requirements

Provide networking cabling infrastructure for all office and manufacturing site operations for full IP connectivity using fibre & Cat 5e/6 UTP cabling infrastructure

The Solution

GRW Data & Communications can provide full consultation with a migration from Cat5 to Cat6 UTP cabling with fibre optical backbones to various plant locations for 8 secure operational cell areas. Wireless technology was also supported for seamless working across the full site for WIFI connectivity for mobile palm top and bar coding applications.

Customer Feedback

GRW Data & Communications understood our networking cabling requirements and offered the correct solution for both office and shopfloor working environments, connecting both data and voice applications over the network, including wireless base stations for palm top access on the shop floor. The work was fully project managed and completed on time and to budget and will use GRW again for any future work.
